

MRAG-HC System

Abstract

Multilingual Retrieval-Augmented Generation system with hallucination control for domain-specific knowledge retrieval.

Introduction

LLMs suffer from hallucination issues. This system mitigates them using RAG + verification.

Methodology

Pipeline includes ingestion, chunking, embedding, retrieval, LLM generation, and verification layer.

Hallucination Control

Fact checking + confidence scoring ensures reliability of generated responses.

Evaluation

Metrics include accuracy, faithfulness, and hallucination rate.
